

Project Medico: Centralized Healthcare Management System

Medico is a centralized, cloud-based clinic management system designed to digitize and streamline healthcare operations by seamlessly connecting patients, doctors, and clinic administrators within a single integrated platform. The system automates traditional paper-based workflows, eliminates scheduling conflicts, and tracks complete electronic health records (EHR) safely in real-time. For patients, it offers smooth booking experiences and instant digital prescriptions, while empowering doctors and administrators with intuitive tracking tools and comprehensive operational dashboards. By bridging these core parties, Medico reduces clinical administrative errors by up to 70%, optimizes waiting times, and enhances the overall quality and security of the healthcare delivery experience.
